

# The Law of Improbable Implication

© Dr. Thomas A. Lifvendahl, 2014

May 13, 2014 @19:25 Central Standard Time

I have been struck for a long time as to how human beings can come up with nonsensical beliefs. Case at hand...the disappearance of Malaysian Airlines Flight 370. How can a very large plane (Boeing 777) carrying 227 passengers and 12 crew vanish one hour out after a routine take off? When an international search effort covering a significant portion of ocean turns up almost nothing people search for irrational solutions. Thus the plane was abducted by a UFO. Therefore my creating the *Law of Improbable Implication*.

## Defined

One can define “improbable” to mean *unlikely to be true or to have occurred...an unexplained and apparently inauthentic phenomenon*.

One can also define “implication” to mean *the relationship between propositions that one “thing” logically follows from another” thing...regardless of its veracity*.

If one were to create a logical formula it might look like this.... $A+B$  does not equal  $C$ , it equals  $Z$  squared to infinity ( $Z$  being a UFO from the planet Zircon 9).

In essence I am intrigued with how people fabricate irrational thoughts into “reality” based on minimal knowledge and *minimum high regard* for scientifically seeking the facts of the matter. Thus the Law of Improbable Implication seemed a reasonable explanation abducted in my “mind’s eye”.

## Summary

Hopefully this law is only a humorous verbalization of human fallibility and not an immutable “law” of human behavior. May the Farce be with you in all that you do!
